Hieronymus Bosch, Painter and Draughtsman

**Catalogue raisonné • Volume 1**

Matthijs Ilsink, Jos Koldeweij, Ron Spronk, Luuk Hoogstede, Robert G. Erdmann, Rik Klein Gotink, Hanneke Nap, Daan Veldhuizen

Volume 1, the Catalogue raisonné, deals with all drawings and paintings by Bosch and his workshop, accompanied by discussions of several paintings until recently considered to be autograph. The Catalogue raisonné is introduced by four essays exploring Bosch’s life and career, the question ‘what is a Bosch?’, the materials and techniques he used and the conservation and restoration history of his works.

608 pages

The information assembled by the BRCP has been made accessible via the website boschproject.org. The master's work can be viewed and compared there down to the smallest details using the groundbreaking 'curtain viewers' developed by the computer scientist Robert G. Erdmann. These offer visitors to the site an accessible way to process and compare the large amount of data assembled using the new imaging and photographic techniques. Each type of photograph is overlaid in a series of 'curtains' that can be drawn back to allow the user to concentrate on a single detail without losing sight of the context. The website makes it possible to journey through each layer of a particular painting.

All archive sources on Hieronymus Bosch, his immediate context and his work have been made available, together with translations and notes, on the BoschDoc website – a collaborative project with Huygens ING, Den Bosch Municipal Archive and Radboud University Nijmegen. BoschDoc can be accessed via boschdoc.huygens.knaw.nl & boschproject.org.
